# System Overview

This document defines the complete functional requirements, flow specifications, and user navigation maps for the Sri Lanka Clothing Boutique Marketplace Application. It is intended as the single source of truth for the 6-member development team.

## Concept Summary

- Authentic boutique sellers are manually verified by platform admins before they can list products.
- Verified sellers manage their shop and product listings through the mobile app.
- Registered customers browse listings, view product details, and place orders through the mobile app.
- Admins manage the entire platform through a separate web-based admin panel.

## Key Business Rules

1. When a customer places an order, the system automatically notifies the relevant seller with order and customer details.
2. The seller manually handles packing, packaging, and courier handover.
3. Shipments use the app company address as the "from" address — not the seller's personal address.
4. Admins can cancel any order before the seller dispatches/couriers the item.
5. Payment methods: Card (online) or Cash on Delivery (COD).
6. All financial operations including seller payouts are managed exclusively by admins.
7. Only customers who completed an order can submit a review for a product or seller.

## Roles & Access Summary

| Operation | Description                                                                            |
|-----------|----------------------------------------------------------------------------------------|
| Customer  | Mobile app — self-registers, browses products, places orders, submits reviews.         |
| Seller    | Mobile app — registers (pending verification), lists products, updates orders.         |
| Admin     | Web panel — verifies sellers, manages all platform data, handles payments and payouts. |

## Module Index

| Operation | Description                         |
|-----------|-------------------------------------|
| Module 1  | User Management — Customer Accounts |
| Module 2  | Seller & Shop Management            |
| Module 3  | Product & Inventory Management      |
| Module 4  | Order Management                    |
| Module 5  | Reviews & Ratings Management        |
| Module 6  | Admin & Platform Management (Web)   |

# Module 1 — User Management

## 1.1 Module Breakdown

Handles everything related to customer accounts on the mobile app. Customers can only self-register — no admin creation of customer accounts. The module covers registration, authentication, profile management, address management, and account deactivation.

| Operation | Description                                                                |
|-----------|----------------------------------------------------------------------------|
| Create    | Customer self-registration with name, email, phone, password, and address. |
| Read      | View own profile, login/authentication, view account details.              |
| Update    | Edit profile info, change password, add/update delivery addresses.         |
| Delete    | Deactivate or permanently delete own account.                              |

## 1.2 Functional Requirements

### FR1.1 Customer Self-Registration

**Actor:** Unregistered User

**Trigger:** User taps "Register" on the Welcome screen

**Inputs:** Full name, email address, phone number, password (+ confirm), home address

**Validation:** Email uniqueness check, phone format, password minimum strength, all required fields

**Output:** New customer account created; user directed to Login screen or auto-logged in

**Constraints:** Customers can ONLY self-register — no admin-created accounts

### FR1.2 Customer Login / Authentication

**Actor:** Registered Customer

**Trigger:** User taps "Login" on the Welcome screen

**Inputs:** Email + Password

**Output:** Authenticated session; redirect to Home (Browse Products)

**Error Cases:** Wrong credentials → error message; account deactivated → inform user; too many attempts → temporary lock

**Security:** JWT or session token; remember-me option

### FR1.3 View Profile

**Actor:** Authenticated Customer

**Trigger:** Tap "My Profile" in bottom navigation or settings menu

**Output:** Displays: name, email, phone, registered addresses, account creation date

**Permissions:** Customer can only view their own profile

### FR1.4 Edit Profile Info

**Actor:** Authenticated Customer

**Trigger:** Tap "Edit" on the Profile screen

**Inputs:** Name, phone number (email is read-only identifier)

**Output:** Profile updated; confirmation shown

### FR1.5 Change Password

**Actor:** Authenticated Customer

**Trigger:** Tap "Change Password" in Profile or Settings

**Inputs:** Current password, new password, confirm new password

**Validation:** Current password must match; new password meets strength rules; new and confirm match

**Output:** Password updated; session may be refreshed

### FR1.6 Manage Delivery Addresses

**Actor:** Authenticated Customer

**Trigger:** Tap "My Addresses" in Profile

**Operations:** Add new address, edit existing address, delete address, set default address

**Constraints:** At least one address must exist if orders are active; default address auto-populates at checkout

### FR1.7 Deactivate / Delete Account

**Actor:** Authenticated Customer

**Trigger:** Tap "Deactivate Account" in Profile/Settings

**Flow:** Confirmation dialog shown → user confirms → account deactivated (soft delete); data retained for order history

**Constraints:** Cannot deactivate if an active order is in progress; admin can also deactivate any account from the admin panel

## 1.3 Complete Flow for Each FR

### FR1.1 — Registration Flow

8. User opens app → Welcome screen appears.
9. User taps "Register" → Registration screen loads.
10. User fills all required fields: name, email, phone, password, confirm password, home address.
11. System validates all fields in real-time (inline error messages).
12. User taps "Create Account" → system checks email uniqueness.
13. If email already exists → error: "An account with this email already exists."
14. If valid → account created → user redirected to Home (Browse Products) with session started.
15. Welcome/onboarding message displayed on first login.

### FR1.2 — Login Flow

16. User opens app → Welcome screen → taps "Login".
17. Login screen loads. User enters email and password.
18. Tap "Login" → system validates credentials.
19. On success → session token issued → redirect to Home.
20. On failure → inline error message; after 5 failed attempts → account temporarily locked for 15 minutes.
21. Deactivated account → message shown, directed to contact support.

### FR1.3 — View Profile Flow

22. Authenticated customer taps "Profile" tab in bottom navigation.

23. Profile screen loads with all account details read-only.
24. User can tap "Edit" to enter edit mode (FR1.4) or navigate to sub-sections (Addresses, Change Password).

### FR1.4 — Edit Profile Info Flow

25. From Profile screen → tap "Edit Profile".
26. Editable fields become active: name, phone.
27. User makes changes → taps "Save Changes".
28. System validates and saves → success toast shown.
29. User redirected back to read-only Profile screen.

### FR1.5 — Change Password Flow

30. From Profile screen → tap "Change Password".
31. Change Password screen loads with three fields.
32. User enters current password, new password, confirm new password.
33. Tap "Update Password" → system validates.
34. If current password incorrect → error shown.
35. If new passwords do not match → error shown.
36. If valid → password updated → success message → redirect to Profile.

### FR1.6 — Manage Addresses Flow

37. From Profile → tap "My Addresses".
38. Address list screen shows all saved addresses with default badge.
39. Tap "Add New Address" → form opens; user enters address details → save.
40. Tap on existing address → options: Edit, Set as Default, Delete.
41. Delete prompts confirmation dialog before removing.

### FR1.7 — Deactivate Account Flow

42. From Profile → Settings → tap "Deactivate Account".
43. Warning dialog: "This will deactivate your account. Active orders will not be affected."
44. User must type "CONFIRM" or re-enter password to proceed.
45. System checks for active orders — if any, deactivation is blocked with guidance.
46. If no blockers → account soft-deleted → session terminated → app returns to Welcome screen.

## 1.4 User Navigation Flows

### Screen: Welcome Screen

| Property        | Details                                                   |
|-----------------|-----------------------------------------------------------|
| Access          | All unauthenticated users; app entry point                |
| Navigation Path | App launch (no session) → Welcome Screen                  |
| Previous Screen | None (entry point)                                        |
| Next Screens    | "Login" → Login Screen   "Register" → Registration Screen |
| Back Nav        | Android back button exits app                             |

|                            |                                                       |
|----------------------------|-------------------------------------------------------|
| <b>Redirect Conditions</b> | If valid session token exists → auto-redirect to Home |
| <b>Permission</b>          | Public (no login required)                            |

### Screen: Registration Screen

| Property                   | Details                                                                       |
|----------------------------|-------------------------------------------------------------------------------|
| <b>Access</b>              | Unauthenticated users only                                                    |
| <b>How to Reach</b>        | Welcome Screen → tap "Register"                                               |
| <b>Previous Screen</b>     | Welcome Screen                                                                |
| <b>Next Screens</b>        | Success → Home Screen   Cancel → Welcome Screen                               |
| <b>Back Nav</b>            | Tap back → Welcome Screen (with discard-changes warning if fields are filled) |
| <b>Redirect Conditions</b> | If already authenticated → redirect to Home                                   |
| <b>Permission</b>          | Public                                                                        |

### Screen: Login Screen

| Property                   | Details                                                                                                 |
|----------------------------|---------------------------------------------------------------------------------------------------------|
| <b>Access</b>              | Unauthenticated users                                                                                   |
| <b>How to Reach</b>        | Welcome Screen → tap "Login"   Session expired → auto-redirect here                                     |
| <b>Previous Screen</b>     | Welcome Screen                                                                                          |
| <b>Next Screens</b>        | Success → Home Screen   "Register" link → Registration Screen   Forgot Password → Password Reset Screen |
| <b>Back Nav</b>            | Welcome Screen                                                                                          |
| <b>Redirect Conditions</b> | If already authenticated → redirect to Home                                                             |
| <b>Permission</b>          | Public                                                                                                  |

### Screen: Profile Screen

| Property                   | Details                                                                                                                                                       |
|----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Access</b>              | Authenticated Customer only                                                                                                                                   |
| <b>How to Reach</b>        | Bottom navigation → "Profile" tab                                                                                                                             |
| <b>Previous Screen</b>     | Any screen in bottom navigation                                                                                                                               |
| <b>Next Screens</b>        | "Edit Profile" → Edit Profile Screen   "Change Password" → Change Password Screen   "My Addresses" → Address Management Screen   "Settings" → Settings Screen |
| <b>Back Nav</b>            | Returns to previously active tab                                                                                                                              |
| <b>Redirect Conditions</b> | Unauthenticated user → Login Screen                                                                                                                           |

|                   |                          |
|-------------------|--------------------------|
| <b>Permission</b> | Customer (own data only) |
|-------------------|--------------------------|

### Screen: Edit Profile Screen

| Property               | Details                                                              |
|------------------------|----------------------------------------------------------------------|
| <b>Access</b>          | Authenticated Customer                                               |
| <b>How to Reach</b>    | Profile Screen → tap "Edit Profile"                                  |
| <b>Previous Screen</b> | Profile Screen                                                       |
| <b>Next Screens</b>    | Save → Profile Screen (with success toast)   Cancel → Profile Screen |
| <b>Back Nav</b>        | Profile Screen (with discard warning if unsaved changes)             |
| <b>Permission</b>      | Customer (own data only)                                             |

### Screen: Address Management Screen

| Property               | Details                                                             |
|------------------------|---------------------------------------------------------------------|
| <b>Access</b>          | Authenticated Customer                                              |
| <b>How to Reach</b>    | Profile Screen → "My Addresses"   Checkout → "Add / Change Address" |
| <b>Previous Screen</b> | Profile Screen or Checkout Screen                                   |
| <b>Next Screens</b>    | Add/Edit Address → Address Form Screen   Done → previous screen     |
| <b>Back Nav</b>        | Profile Screen or Checkout Screen (returns to caller)               |
| <b>Permission</b>      | Customer (own addresses only)                                       |

## Module 2 — Seller & Shop Management

### 2.1 Module Breakdown

Manages boutique seller accounts and their shop profiles. Sellers register through the mobile app but cannot go live until an admin manually verifies their business documents. Sellers access their shop dashboard through the same mobile app under a dedicated seller mode.

| Operation | Description                                                                             |
|-----------|-----------------------------------------------------------------------------------------|
| Create    | Seller registration: shop name, owner details, business documents, contact information. |
| Read      | View own shop profile, shop listings page, seller dashboard.                            |
| Update    | Edit shop info, update business documents, update contact details.                      |
| Delete    | Admin suspends or removes a seller/shop from the platform.                              |

### 2.2 Functional Requirements

#### FR2.1 Seller Registration

**Actor:** Unregistered Seller

**Trigger:** User selects "Register as Seller" on the Welcome or Switch-Role screen

**Inputs:** Shop name, owner full name, email, phone number, business registration documents (upload), contact address, bank account details (for payouts)

**Output:** Seller account created with status: Pending Verification; seller notified that review is underway

**Constraints:** Seller cannot list products until admin approves; separate account from customer accounts

#### FR2.2 Admin Manual Seller Verification

**Actor:** Admin (via Web Panel)

**Trigger:** Admin reviews pending seller applications in the admin panel

**Inputs:** Uploaded business documents, shop details

**Actions:** Approve → seller status becomes Active | Reject → seller notified with reason

**Output:** Approved sellers can log in to their seller dashboard and begin listing products; rejected sellers are notified via in-app notification and email

#### FR2.3 View Shop Profile

**Actor:** Verified Seller (own profile) | Customer (public view) | Admin

**Trigger:** Seller: bottom nav "Shop" | Customer: tap shop name on product or listing page | Admin: from admin panel seller list

**Output:** Shop name, logo/banner image, description, product count, average rating, contact details, join date

#### FR2.4 Edit Shop Info

**Actor:** Verified Seller

**Trigger:** Seller taps "Edit Shop" on their shop dashboard

**Inputs:** Shop name, description, logo/banner image, contact details

**Output:** Shop profile updated; visible to all customers immediately

## FR2.5 Update Business Documents

**Actor:** Verified Seller

**Trigger:** Seller taps "Update Documents" in Shop Settings

**Inputs:** New document files (PDF, image)

**Output:** Documents updated; admin may re-review if required by platform policy

## FR2.6 Suspend or Remove Seller

**Actor:** Admin (Web Panel)

**Trigger:** Admin selects a seller and chooses "Suspend" or "Remove"

**Actions:** Suspend → shop hidden from customers, seller cannot list new products, active orders are flagged for admin | Remove → permanent deactivation, all listings unpublished

**Constraints:** Admin must provide a reason; seller is notified via email and in-app message

## 2.3 Complete Flow for Each FR

### FR2.1 — Seller Registration Flow

47. User opens app → Welcome screen → taps "Register as Seller".
48. Seller registration form loads (multi-step if needed).
49. Step 1: Personal details (name, email, phone, password).
50. Step 2: Shop details (shop name, description, category focus).
51. Step 3: Document upload (business registration certificate, NIC).
52. Step 4: Bank account details for payouts.
53. Seller taps "Submit for Verification" → account created with status: Pending.
54. In-app message and email sent: "Your shop is under review. We'll notify you within 3-5 business days."
55. Seller can log in but sees a "Pending Verification" dashboard — no listing capability.

### FR2.2 — Admin Verification Flow

56. Admin logs into web panel → navigates to "Seller Verification" queue.
57. Admin opens a pending seller application.
58. Reviews submitted documents, shop name, business details.
59. Option A — Approve: status changed to Active; seller receives in-app notification and email with approval.
60. Option B — Reject: admin enters rejection reason; seller notified with reason and option to reapply.

### FR2.3 — View Shop Profile Flow

61. Customer view: tap shop name on any product card → Shop Profile screen opens.
62. Seller view: tap "My Shop" in bottom navigation → own shop dashboard.
63. Admin view: admin panel → Sellers list → tap seller → Shop Details screen.

### FR2.4 — Edit Shop Info Flow

64. Verified seller navigates to "My Shop" → taps "Edit Shop".
65. Edit form pre-filled with current details.
66. Seller updates fields → taps "Save".

- 67. System validates → updates applied immediately → success toast shown.
- 68. Seller returns to Shop Dashboard.

### FR2.6 — Suspend / Remove Seller Flow (Admin)

- 69. Admin opens web panel → Sellers section → selects seller.
- 70. Chooses "Suspend" or "Remove" from action dropdown.
- 71. Confirmation modal appears with reason text box (required).
- 72. Admin confirms → platform executes action.
- 73. All active listings hidden immediately; active orders flagged for admin review.
- 74. Seller and affected customers receive notifications.

## 2.4 User Navigation Flows

### Screen: Seller Welcome / Role Selection Screen

| Property        | Details                                                                                   |
|-----------------|-------------------------------------------------------------------------------------------|
| Access          | Unauthenticated users                                                                     |
| How to Reach    | App launch (no session) → Welcome Screen → "Sell on Ceylon"                               |
| Previous Screen | Welcome Screen                                                                            |
| Next Screens    | "Register as Seller" → Seller Registration Form   "Login as Seller" → Seller Login Screen |
| Permission      | Public                                                                                    |

### Screen: Seller Registration Form

| Property        | Details                                                                            |

## Module 3 — Product & Inventory Management

### 3.1 Module Breakdown

Handles all product listings created by verified sellers. Customers can browse, search, filter, and view product details. Sellers manage their own product catalogue including stock levels, images, sizes, colors, and pricing.

| Operation | Description                                                                                                           |
|-----------|-----------------------------------------------------------------------------------------------------------------------|
| Create    | Seller adds a new product listing with name, description, category, price, sizes, colors, images, and stock quantity. |
| Read      | Customers browse products, apply filters, view product detail pages. Sellers view their own listings dashboard.       |
| Update    | Seller edits product info, updates stock quantity, marks items as out of stock.                                       |
| Delete    | Seller removes or unpublishes a product listing. Admin can forcibly unpublish.                                        |

### 3.2 Functional Requirements

#### FR3.1 Add New Product Listing

**Actor:** Verified Seller

**Trigger:** Seller taps "Add Product" on their Product Management screen

**Inputs:** Product name, description, category (from admin-managed list), price (LKR), sizes (multi-select: XS/S/M/L/XL/XXL or custom), colors (with swatches), images (min 1, max 10), stock quantity per variant

**Output:** Product listed and visible to customers immediately after submission

**Constraints:** Seller must be verified; at least one image required; price must be greater than 0

#### FR3.2 Browse, Search, and Filter Products

**Actor:** Authenticated Customer

**Trigger:** Customer opens Home tab or Search tab

**Browse:** Paginated product grid sorted by newest/popular; filtered by category

**Search:** Keyword search on product name, description, and shop name

**Filters:** Category, price range, size, color, seller rating, in-stock only

**Output:** Filtered product grid displayed; empty state if no results

#### FR3.3 View Product Detail Page

**Actor:** Authenticated Customer

**Trigger:** Customer taps on any product card

**Output:** Full product detail: name, image gallery (swipeable), description, price, available sizes & colors, stock status, seller name (tappable → Shop Profile), average rating, recent reviews, "Add to Cart" / "Buy Now" button

**Out of Stock:** Add to Cart and Buy Now buttons are disabled; "Out of Stock" badge shown

#### FR3.4 Edit Product Info

**Actor:** Verified Seller (own products only)

**Trigger:** Seller taps a product from their listing → taps "Edit"

**Editable Fields:** Name, description, price, category, images, sizes, colors

**Output:** Product updated; changes reflected immediately on customer-facing pages

### FR3.5 Update Stock / Mark as Out of Stock

**Actor:** Verified Seller

**Trigger:** Seller taps "Manage Stock" on a product listing

**Options:** Update quantity per variant (size/color), manually mark as Out of Stock, restock item

**Auto-trigger:** System automatically marks item as Out of Stock when quantity reaches zero after an order

**Output:** Stock updated; product page reflects current availability instantly

### FR3.6 Remove / Unpublish Product Listing

**Actor:** Verified Seller (own products) | Admin (any product)

**Trigger:** Seller/Admin taps "Unpublish" or "Delete" on a product

**Options:** Unpublish (hidden from customers, no new orders) | Delete (permanent removal)

**Constraints:** Products with active orders cannot be deleted; admin override available; soft delete preferred for audit

## 3.3 Complete Flow for Each FR

### FR3.1 — Add Product Flow

75. Seller navigates to "My Products" → taps "Add Product".
76. Product creation form loads (single or multi-step).
77. Seller fills: name, description, category (dropdown), price.
78. Seller adds sizes (checkboxes) and colors (color picker or tags).
79. Seller uploads product images (camera or gallery picker); can reorder.
80. Seller enters stock quantity for each variant (size x color combination).
81. Seller taps "Publish" → system validates all required fields.
82. Product goes live → appears in customer browse feed immediately.
83. Seller receives confirmation and product appears in "My Products" list.

### FR3.2 — Browse / Search Flow (Customer)

84. Customer opens app → Home tab shows featured/newest products.
85. Search tab: customer types keyword → results update in real time.
86. Filters icon (top right) → Filter Sheet slides up; customer sets filters → applies.
87. Product grid updates to reflect search + filters.
88. Customer scrolls; infinite scroll or "Load More" pagination.
89. Empty state shown if no products match: "No products found. Try adjusting your filters."

### FR3.3 — View Product Detail Flow (Customer)

90. Customer taps a product card from Home, Search, or Category view.
91. Product Detail screen loads with image gallery at top.
92. Customer swipes images; selects size from size selector; selects color.
93. Stock status updates based on selected variant.
94. Customer scrolls down to see description, seller info, and reviews.
95. Taps seller name → Shop Profile screen.

96. Taps "Add to Cart" (if available) or "Buy Now" → navigates to Cart or Checkout.

### FR3.5 — Update Stock Flow

97. Seller taps product in "My Products" → taps "Manage Stock".  
98. Stock management screen shows each variant with current quantity.  
99. Seller updates quantities or toggles "Out of Stock" per variant.  
100. Taps "Save" → changes reflected on product page immediately.

## 3.4 User Navigation Flows

### Screen: Home Screen (Browse Products)

| Property        | Details                                                                                                                      |
|-----------------|------------------------------------------------------------------------------------------------------------------------------|
| Access          | Authenticated Customer                                                                                                       |
| How to Reach    | Successful login → auto-redirect   Bottom nav "Home" tab                                                                     |
| Previous Screen | Login Screen or any bottom nav tab                                                                                           |
| Next Screens    | Product card tap → Product Detail   Category chip → Category View   Search bar tap → Search Screen   Cart icon → Cart Screen |
| Back Nav        | Android back → exit app confirmation                                                                                         |
| Permission      | Authenticated Customer only                                                                                                  |

### Screen: Search / Filter Screen

| Property        | Details                                                                                      |
|-----------------|----------------------------------------------------------------------------------------------|
| Access          | Authenticated Customer                                                                       |
| How to Reach    | Home → tap search bar   Bottom nav "Search" tab                                              |
| Previous Screen | Home Screen                                                                                  |
| Next Screens    | Result tap → Product Detail Screen   Filter icon → Filter Sheet (modal)   Back → Home Screen |
| Back Nav        | Home Screen                                                                                  |
| Permission      | Authenticated Customer                                                                       |

### Screen: Product Detail Screen

| Property        | Details                                                                             |
|-----------------|-------------------------------------------------------------------------------------|
| Access          | Authenticated Customer                                                              |
| How to Reach    | Home → product card tap   Search results → tap product   Shop Profile → product tap |

## Module 4 — Order Management

### 4.1 Module Breakdown

Handles the complete order lifecycle from placement through delivery. Includes automatic seller notification on new orders, status progression, payment handling (Card / COD), admin oversight, and cancellation rules.

| Operation | Description                                                                                                                                                                  |
|-----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Create    | Customer places an order — selects products, quantity, delivery address, payment method (Card or COD). System auto-notifies the seller with full order and customer details. |
| Read      | Customer views order history, order detail, real-time status tracking. Seller views incoming orders. Admin views all orders platform-wide.                                   |
| Update    | Order status progresses: Pending → Confirmed → Shipped → Delivered (automated/seller-triggered). Customer or Admin can cancel before dispatch.                               |
| Delete    | Soft delete: cancelled or failed orders removed from active view but retained for audit and financial records.                                                               |

### 4.2 Functional Requirements

#### FR4.1 Place an Order

**Actor:** Authenticated Customer

**Trigger:** "Buy Now" or "Checkout" from Cart screen

**Inputs:** Selected products (with sizes/colors/qty), delivery address (from saved list or new), payment method (Card or COD)

**Card Payment:** Redirects to payment gateway (e.g., PayHere/Stripe); order created only on successful payment authorization

**COD:** Order created immediately; payment collected on delivery; admin manages reconciliation

**Output:** Order created with status: Pending; customer receives order confirmation; seller auto-notified (see FR4.2)

#### FR4.2 Automatic Seller Notification on Order Placement

**Actor:** System (automated)

**Trigger:** Order successfully placed

**Action:** System sends in-app notification and email to the relevant seller with: order ID, product name, size, color, quantity, customer name, delivery address, payment method, order timestamp

**Constraint:** If an order contains products from multiple sellers, each seller receives only their portion of the order

**Failure Handling:** If notification fails → system retries 3 times; admin is alerted if all retries fail

#### FR4.3 View Order History

**Actor:** Authenticated Customer | Verified Seller | Admin

**Customer:** Sees all own past and active orders: order ID, products thumbnail, date, total, status badge

**Seller:** Sees all orders related to their products: incoming orders, in-progress, completed

**Admin:** Sees all orders across all sellers with full customer and seller detail

#### FR4.4 View Order Detail & Status Tracking

**Actor:** Customer (own orders) | Seller (own order items) | Admin (all)

**Trigger:** Tap on an order in Order History

**Output:** Order ID, item list (with images), quantities, sizes, total price, delivery address, payment method, payment status, seller details, order status timeline (with timestamps), tracking notes (when added by seller/admin)

#### FR4.5 Order Status Lifecycle

**Statuses:** Pending → Confirmed → Shipped → Delivered

**Pending:** Order placed; awaiting seller confirmation. Admin can cancel at this stage.

**Confirmed:** Seller has acknowledged the order and is preparing it. Admin can cancel at this stage.

**Shipped:** Seller has handed over to courier; dispatch address = app company address. Admin CANNOT cancel after this point.

**Delivered:** Courier has delivered to customer. Order closes. Review window opens.

**Cancelled:** Order cancelled by customer (before Confirmed) or admin (before Shipped). Refund handled by admin if card payment.

#### FR4.6 Seller Updates Order Status

**Actor:** Verified Seller

**Trigger:** Seller taps an incoming order → updates status

**Flow:** Pending → taps "Confirm Order" | Confirmed → taps "Mark as Shipped" (enters courier name/tracking if available)

**Constraint:** Seller uses app company address as "from" address; seller cannot mark as Delivered — only courier/system does

**Notification:** Customer receives in-app notification at each status change

#### FR4.7 Cancel Order

**Actor:** Customer (self-cancel) | Admin (platform-level cancel)

**Customer:** Can cancel only if order status is Pending. Must provide cancellation reason.

**Admin:** Can cancel any order that has NOT yet reached Shipped status. Admin enters reason.

**Output:** Order marked Cancelled; seller notified; if card payment → admin initiates refund process; COD → no refund needed

#### FR4.8 Admin Order Oversight

**Actor:** Admin (Web Panel)

**View:** Full order list with filters: status, date range, seller, payment method, customer

**Actions:** View full order detail, cancel order (before Shipped), add internal notes

**Financial:** Admin can see payment status (paid/pending), mark COD orders as paid, initiate payouts to sellers

### 4.3 Complete Flow for Each FR

#### FR4.1 + FR4.2 — Place Order & Auto-Notify Seller Flow

101. Customer on Product Detail → selects size, color, qty → taps "Buy Now" (or adds to Cart then Checkout).

102. Checkout screen: delivery address auto-filled with default address (changeable); customer selects payment method.
103. Card: taps "Pay Now" → payment gateway opens → customer completes payment → returns to app.
104. COD: taps "Place Order" → order created without payment processing.
105. System creates order with status: Pending.
106. Order Confirmation screen displayed with order ID and estimated delivery window.
107. System immediately dispatches notification + email to seller with full order details.
108. Customer can view order in "My Orders" → Order History.

#### FR4.5 + FR4.6 — Order Status Progression Flow

109. Seller receives notification → opens "Orders" in their dashboard → sees new Pending order.
110. Seller reviews order details → taps "Confirm Order" → status: Confirmed. Customer notified.
111. Seller packs item → hands to courier using the app company address as return/from address.
112. Seller taps "Mark as Shipped" → enters tracking number if available → status: Shipped. Customer notified.
113. On delivery → system or admin marks as Delivered. Customer receives "Your order has arrived" notification.
114. Review window opens: customer can now submit a review for the product and/or seller.

#### FR4.7 — Cancel Order Flow

115. Customer: Order History → selects Pending order → "Cancel Order" → picks reason → confirms → order Cancelled.
116. Admin: Web panel → Orders list → selects order (Pending or Confirmed only) → "Cancel Order" → enters reason → confirms.
117. Seller notified of cancellation.
118. Card payment → admin manually processes refund through payment gateway dashboard.
119. COD → no financial action needed; order closed.

## 4.4 User Navigation Flows

### Screen: Cart Screen

| Property        | Details                                                                                   |
|-----------------|-------------------------------------------------------------------------------------------|
| Access          | Authenticated Customer                                                                    |
| How to Reach    | Product Detail → "Add to Cart"   Cart icon in top nav                                     |
| Previous Screen | Product Detail Screen or Home                                                             |
| Next Screens    | "Checkout" → Checkout Screen   Product tap → Product Detail   Remove item → stays on Cart |
| Back Nav        | Previous screen (Product Detail or Home)                                                  |
| Permission      | Authenticated Customer                                                                    |

### Screen: Checkout Screen

| Property | Details |
|----------|---------|
|----------|---------|

|                            |                                                                                                         |

| <b>How to Reach</b>    | Seller Orders → tap an order                                                                        |
| <b>Previous Screen</b> | Seller Orders Screen                                                                                |
| <b>Next Screens</b>    | "Confirm Order" → updates status   "Mark as Shipped" → updates status   Back → Seller Orders Screen |
| <b>Back Nav</b>        | Seller Orders Screen                                                                                |
| <b>Permission</b>      | Verified Seller (own orders only)                                                                   |

## Module 5 — Reviews & Ratings Management

### 5.1 Module Breakdown

Manages customer reviews and ratings for products and sellers. Reviews can only be submitted after a completed (Delivered) order to ensure authenticity. Admins can remove reviews that violate platform policies.

| Operation | Description                                                                                               |
|-----------|-----------------------------------------------------------------------------------------------------------|
| Create    | Customer submits a review/rating (1–5 stars + text) for a product or seller after a completed order only. |
| Read      | View product reviews, seller ratings, average rating display on product cards and shop profiles.          |
| Update    | Customer can edit their review within a defined time window (e.g., 72 hours after submission).            |
| Delete    | Admin removes policy-violating reviews; customer deletes their own review at any time.                    |

### 5.2 Functional Requirements

#### FR5.1 Submit a Review / Rating

**Actor:** Authenticated Customer

**Trigger:** Order status is Delivered → "Write a Review" prompt appears on Order Detail screen and My Orders list

**Scope:** Customer can submit one review for the product AND one separate rating/review for the seller per completed order

**Inputs:** Star rating (1–5), written review text (optional), photos (optional, max 3)

**Constraint:** One review per product per order; reviews cannot be submitted if order was cancelled or incomplete

**Output:** Review published; product and seller average ratings recalculated; seller notified of new review

#### FR5.2 View Product Reviews

**Actor:** Any authenticated customer

**Trigger:** Product Detail screen → scroll to Reviews section | Tap "See All Reviews"

**Output:** Paginated list of reviews: reviewer name (first name + initial), star rating, review text, photos, date, "Helpful" count

**Sort:** Most recent | Highest rated | Most helpful

#### FR5.3 View Seller Ratings

**Actor:** Any authenticated customer

**Trigger:** Shop Profile screen → Ratings section

**Output:** Overall star rating (average), total review count, rating breakdown (5-star%, 4-star%, etc.), recent seller reviews

#### FR5.4 Edit a Review

**Actor:** Authenticated Customer (review author)

**Trigger:** My Reviews or Order Detail → "Edit Review"

**Window:** Editable within 72 hours of original submission

**Output:** Review updated; edit timestamp shown; original submission date retained

**Constraints:** After 72 hours → review is locked; "Edit" button no longer visible

### FR5.5 Customer Deletes Own Review

**Actor:** Authenticated Customer

**Trigger:** My Reviews → long-press or options menu → "Delete Review"

**Output:** Review removed; ratings recalculated; confirmation shown

**Constraints:** Customer can only delete their own reviews; once deleted, cannot re-review the same order item

### FR5.6 Admin Removes Violating Review

**Actor:** Admin (Web Panel)

**Trigger:** Flagged review in admin panel OR admin manually finds it

**Reasons:** Inappropriate language, spam, off-topic, fake review, personal information shared

**Output:** Review removed from public view; customer notified via in-app message with reason; ratings recalculated

**Note:** Admin can also flag and monitor reviews without immediately deleting them

## 5.3 Complete Flow for Each FR

### FR5.1 — Submit Review Flow

120. Order reaches Delivered status → system generates review prompt notification.
121. Customer sees "Rate your purchase" card on My Orders screen.
122. Customer taps "Write Review" → Review Submission screen loads (pre-filled with product thumbnail).
123. Customer taps star rating (1–5) → optional: types review text → optional: uploads up to 3 photos.
124. Customer taps "Submit Review" → review published immediately.
125. Customer is optionally prompted: "Would you also like to rate the seller?" → separate seller review form.
126. Product average rating and seller rating recalculated in real time.
127. Seller receives in-app notification: "You received a new review."

### FR5.4 — Edit Review Flow

128. Customer navigates to Order Detail → Review section, OR "My Reviews" in Profile.
129. If within 72-hour edit window → "Edit" button is visible.
130. Customer taps "Edit" → review form opens pre-filled with existing content.
131. Customer makes changes → taps "Update Review" → review updated.
132. After 72 hours → "Edit" button hidden; review is read-only.

### FR5.6 — Admin Removes Review Flow

133. Admin receives a "Flagged Review" notification or sees it in Flagged Reviews queue.
134. Admin reads the review and assesses it against platform guidelines.
135. Admin selects removal reason from dropdown.

136. Admin taps "Remove Review" → confirmation dialog → confirms.
137. Review removed; customer notified with the reason code; ratings recalculated.

## 5.4 User Navigation Flows

### Screen: Product Reviews Screen

| Property        | Details                                                                      |
|-----------------|------------------------------------------------------------------------------|
| Access          | Authenticated Customer                                                       |
| How to Reach    | Product Detail → "See All Reviews"   Product Detail → Reviews section scroll |
| Previous Screen | Product Detail Screen                                                        |
| Next Screens    | Review author profile (limited view)   Back → Product Detail Screen          |
| Back Nav        | Product Detail Screen                                                        |
| Permission      | Authenticated Customer (read-only for others' reviews)                       |

### Screen: Review Submission Screen

| Property            | Details                                                                          |
|---------------------|----------------------------------------------------------------------------------|
| Access              | Authenticated Customer (completed order only)                                    |
| How to Reach        | My Orders → delivered order → "Write Review"   Notification tap                  |
| Previous Screen     | My Orders or Order Detail Screen                                                 |
| Next Screens        | Submit → Order Detail Screen (with success toast)   Cancel → Order Detail Screen |
| Back Nav            | Order Detail Screen (discard warning if rating or text entered)                  |
| Redirect Conditions | If review already submitted for this order → redirect to read-only Review screen |
| Permission          | Customer who completed the specific order only                                   |

### Screen: My Reviews Screen

| Property        | Details                                                                                                           |
|-----------------|-------------------------------------------------------------------------------------------------------------------|
| Access          | Authenticated Customer                                                                                            |
| How to Reach    | Profile → "My Reviews"                                                                                            |
| Previous Screen | Profile Screen                                                                                                    |
| Next Screens    | "Edit" (if within window) → Review Edit Screen   "Delete" → confirmation dialog → Review removed   Back → Profile |
| Back Nav        | Profile Screen                                                                                                    |
| Permission      | Customer (own reviews only)                                                                                       |

## Module 6 — Admin & Platform Management (Web-Based)

### 6.1 Module Breakdown

The centralized, web-based admin panel for managing the entire platform. Admins have full visibility and control over all customers, sellers, products, orders, reviews, financial operations, and platform settings. This module is NOT accessible via the mobile app.

| Operation | Description                                                                                                |
|-----------|------------------------------------------------------------------------------------------------------------|
| Create    | Create admin accounts, publish platform-wide announcements, add product categories.                        |
| Read      | View all sellers, customers, orders, flagged reviews, financial records, and platform analytics dashboard. |
| Update    | Approve or reject seller verification, manage reported reviews, update platform settings, process payouts. |
| Delete    | Remove fraudulent accounts, delete violating content, deactivate listings, cancel orders.                  |

### 6.2 Functional Requirements

#### FR6.1 Admin Account Management

**Actor:** Admin

**Trigger:** Admin section → "Admin Accounts"

**Operations:** Create new admin account (name, email, role), deactivate admin, reset admin password

**Roles:** Admin (full access) | Admin (standard — cannot create other admins)

**Constraint:** Only Admin can create or deactivate other admin accounts

#### FR6.2 Seller Verification

**Actor:** Admin

**Trigger:** New seller registration queues in "Pending Verifications" section

**Review:** Admin views: shop name, owner details, uploaded business registration documents, contact info, bank details

**Decision:** Approve (status → Active, seller notified) | Reject (admin enters reason, seller notified) | Request More Info (admin sends message to seller)

**SLA:** Recommended: review within 3–5 business days; queue sorted by submission date

#### FR6.3 Customer Management

**Actor:** Admin

**View:** Searchable, filterable list of all customers: name, email, join date, order count, account status

**Actions:** View customer profile and order history, deactivate/reactivate account, flag for review

**Constraint:** Admin can view customer details for support and fraud detection; cannot edit customer profile data

#### FR6.4 Seller Management

**Actor:** Admin

**View:** All sellers with: shop name, verification status, product count, total orders, average rating, join date, payout balance

**Actions:** View seller profile, view seller's product listings, suspend seller, remove seller, update seller status

### FR6.5 Order Management (Admin View)

**Actor:** Admin

**View:** All orders platform-wide with full detail: customer, seller, product, status, payment method, payment status, timestamps

**Filters:** Date range, status, seller, customer, payment method, payment status (paid / unpaid / refunded)

**Actions:** View full order detail, add internal admin notes, cancel order (before Shipped), view COD payment status

### FR6.6 Cancel Any Order (Before Dispatch)

**Actor:** Admin

**Trigger:** Order Detail in admin panel → "Cancel Order"

**Constraint:** Can only cancel orders with status: Pending or Confirmed (not Shipped or Delivered)

**Flow:** Admin selects reason → confirms → order cancelled → seller and customer notified → refund initiated (if card payment)

### FR6.7 Financial Operations & Seller Payouts

**Actor:** Admin

**Principle:** All financial operations are exclusively managed by admins; sellers do not process payments directly

**Card Orders:** Payment received by platform at checkout; admin marks settlement in system

**COD Orders:** Seller collects from courier; admin confirms COD received; admin marks as settled

**Payouts:** Admin calculates seller balance (completed orders - platform commission); marks payout as processed in system

**Records:** All financial transactions logged with timestamps, amounts, and order references for audit

### FR6.8 Review & Moderation Management

**Actor:** Admin

**Triggers:** Customer reports a review → it appears in "Flagged Reviews" queue | Admin manually searches reviews

**Actions:** View flagged review in context, remove review (with reason), dismiss flag, warn reviewer account, ban repeat violators

**Audit:** All moderation actions logged with admin username, timestamp, and reason

### FR6.9 Platform Analytics Dashboard

**Actor:** Admin

**Metrics:** Total orders (daily/weekly/monthly), revenue (gross/net), new customers, new sellers, top-selling products, top sellers by revenue, average order value, COD vs card payment split, refund count and amount

**Filters:** Date range picker, category filter, seller filter

**Output:** Visual charts (bar, line, pie) and exportable summary tables

### FR6.10 Product Category Management

**Actor:** Admin

**Trigger:** Admin panel → "Categories" section

**Operations:** Add new category (name, icon), edit category name, deactivate category (products remain but category hidden from new listings)

**Constraint:** Deleting a category with active products is blocked; admin must migrate or deactivate first

## FR6.11 Platform Announcements

**Actor:** Admin

**Trigger:** Admin panel → "Announcements" → "Create Announcement"

**Inputs:** Title, body text, target audience (all users / customers only / sellers only), publish date, expiry date

**Output:** Announcement shown as a banner or notification in the mobile app to the target audience

## 6.3 Complete Flow for Each FR

### FR6.2 — Seller Verification Flow

138. New seller submits registration → appears in "Pending Verifications" queue in admin panel.
139. Admin logs into web panel → navigates to Seller Verification.
140. Admin opens the pending application; views all submitted info and documents.
141. Option A — Approve: taps "Approve" → system activates seller account → auto-notification sent to seller.
142. Option B — Reject: taps "Reject" → enters rejection reason (required) → notification sent to seller with reason.
143. Option C — Request Info: taps "Request More Information" → enters specific message → seller receives in-app message and email.
144. All decisions are logged in the admin action log.

### FR6.7 — Seller Payout Flow

145. Admin navigates to "Financials" → "Seller Payouts".
146. Admin selects a seller → views: completed orders, gross order value, platform commission (%), net payout due.
147. Admin marks COD orders as collected/settled individually.
148. Admin calculates and processes bank transfer externally → returns to panel → marks payout as "Processed" with amount and date.
149. Seller receives in-app notification: "Your payout of LKR X has been processed."
150. All payout records remain in system for audit.

### FR6.9 — Analytics Dashboard Flow

151. Admin logs in → Dashboard is the default landing page showing key KPIs.
152. Admin can use the date range picker to filter all metrics.
153. Sections: Overview cards (orders, revenue, customers, sellers), Charts panel (trends), Product/Seller Rankings table.
154. Admin can export any table as CSV for offline reporting.

## 6.4 Admin Web Panel Navigation Flows
